Research in Progress

"Extensions to Institutional Economic Analysis and Praxis due to Extensions in the Social Fabric Matrix Approach" (Writing Results)
Specifies and assesses the extensions that have been made to the social fabric approach for research, and explains the resulting extensions to analysis.

"Monetary Policy with Double-Entry Accounting Creates Ecological Damage: Need for Accounting with Ecological Indicators" (On-Going)
To the integrated social fabric matrix, macroeconomic and ecological components are added in order to demonstrate the connection between monetary policy and ecological damage. The monetary system is based on and operates through double-entry accounting, making double-entry accounting a powerful and intrusive system that leads to impacts on the ecological system. Yet, according to economic literature, the monetary system is only expected to meet a narrow set of criteria. If ecological destruction is to be mitigated, governing institutions such as the Fed and Treasury cannot continue to ignore damage to the ecological system caused by the financing of macroeconomic components by banks and other financial institutions.

"Relationship between defense contractors central core and power blocs." (Writing Results)
Relationship between defense contractors' central-core corporations and interlocking directorships.

"Assessment of the Possibility of Integrating the Social Structure of Accumulation, Social Accounting Matrix, and the Social Fabric Matrix Approach to Analysis." (Writing Results)
Integration of the social fabric matrix and the social accounting matrix in order to provide for a means to model the economy for the provisioning process.
